DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takeda et al (JP-410246612) in view of Jongsma (5,406,342).

Regarding claims 1, 6, 7, and 10-12; Takeda et al (of record) discloses all the features of the present invention except that the one-dimensional grids (2,3) having different colors. However, such a feature is known in the art as taught by Jongsma. Jongsma, from the same field of endeavor, mentions that using two gratings of different colors for determining discloses a system for determining the topography of a curved surface is taught in the German reference (column 3 lines 17-30). It would have been obvious to one having ordinary skill in the art to modify the grids of Takeda et al by using grids of different colors as mentioned by Jongsma because using grids of different colors would provide a good images, thus accuracy of the measurement is obtained.

Regarding claim 2, it would have been obvious to one having ordinary skill in the art to use grids of different colors such as red, green or blue because they are function in the same manner.

Regarding claims 3 and 8, using a plurality of prisms and a plurality of white light in the topography system is well known in the art.

Regarding claims 4-5, it would have been obvious to one having ordinary skill in the art to modify the grid patterns of Takeda et al such as grid patterns comprise dots or sinusoidal lines because the system would function in the same manner.

Regarding claim 9, see figure 1 of Takeda et al.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Following references relative to three-dimensional shape measurement: Matsumoto (JP-408101025A), Shishido et al (JP-411338124A), Kuchel et al (5,343,294 and 5,135,309), Matsumoto et al (4,802,759 and 4,668,094), Malione (6,341,016), and Pfister (5,202,749).
